LUCAS SPARK PLUGS

With 150 years of original equipment and aftermarket experience, Lucas brings a fine heritage to an all new range of Spark Plugs.

Lucas Spark Plugs are precision-engineered using premium-grade nickel, platinum, and our ultra-durable iridium technology; delivering dependable ignition and lasting performance across every level.

These plugs are designed to withstand greater wear and tear, maintaining peak efficiency for longer service periods. Iridium spark plugs are also more reliable, require less frequent replacement, and deliver superior performance in the most demanding conditions.

The range is tailored to aftermarket demand to make stocking and selling Lucas Spark Plugs effortless. Ignite your sales performance with a trusted Lucas branded Spark Plug range.

**IRIDIUM ELECTRODE
FOR ENHANCED IGNITION
AND SERVICE LIFE**

**NEVER RUN
OUT WITH
CONVENIENT
10-PACKS**

Fully tested for peace of mind

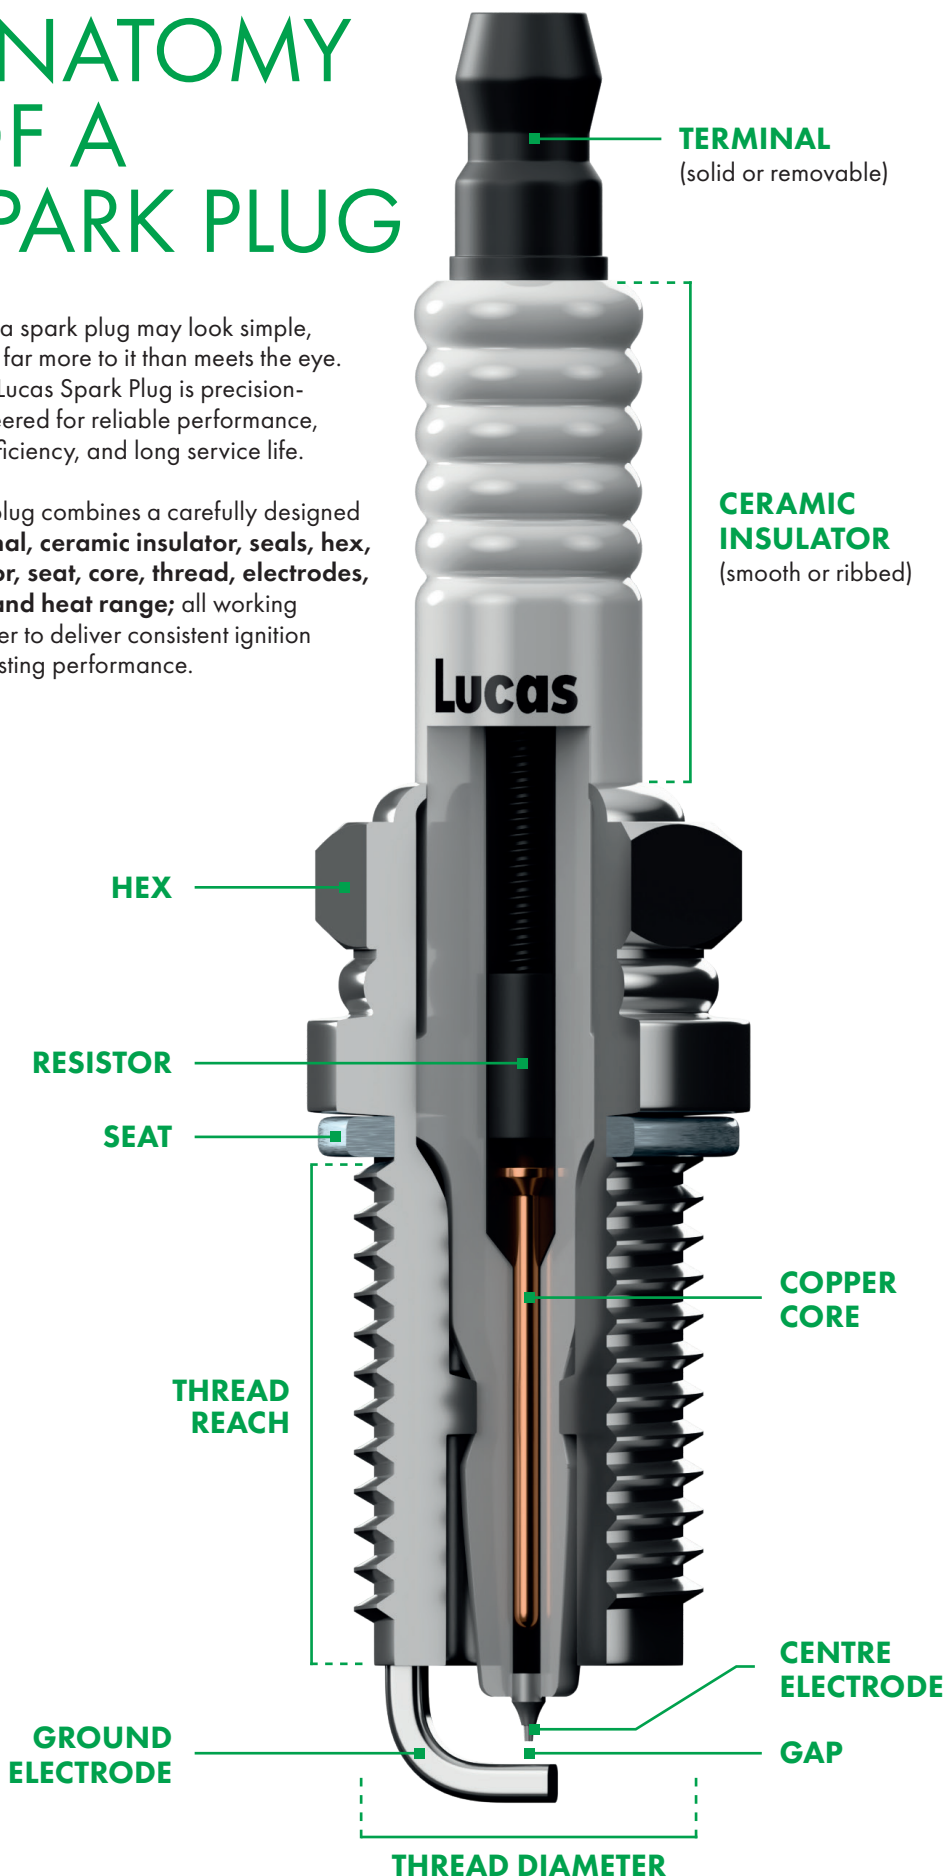

- **Resistance** - ensuring spark plug resistance meets the vehicle manufacturers original parameters.
- **Gap** - making sure the distance between the centre and ground electrodes is to exact requirements.
- **Vibration** - tested for durability under engine vibration conditions.
- **Temperature** - ensuring thermal durability at extreme temperatures for long term reliability.
- **Thread** - avoiding cross-threading for easy installation and removal, protecting the engine.

OUR RANGE GOES FURTHER

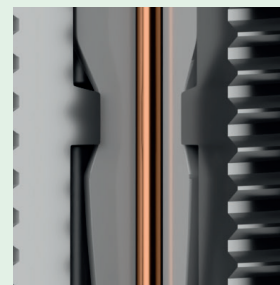

ANATOMY OF A SPARK PLUG

While a spark plug may look simple, there's far more to it than meets the eye. Every Lucas Spark Plug is precision-engineered for reliable performance, fuel efficiency, and long service life.

Each plug combines a carefully designed **terminal, ceramic insulator, seals, hex, resistor, seat, core, thread, electrodes, gap, and heat range**; all working together to deliver consistent ignition and lasting performance.

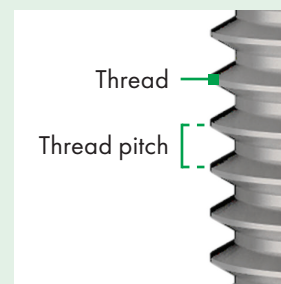

Why use a copper core?

Most spark plugs use a copper core to improve heat conductivity. This helps control temperature, prevent electrode wear, and ensure consistent performance.

They do not have copper electrodes; the outer material is a durable nickel alloy, often enhanced with precious metal coatings like platinum or iridium to extend service life.

How are threads measured?

The firing end of a spark plug threads into the cylinder head, and those threads are defined by three key dimensions: **reach, diameter, and pitch**.

Thread pitch refers to the distance between each thread, measured in millimetres. For example, an M14x1.25 plug has a 14mm thread diameter and a 1.25mm pitch.

TROUBLESHOOTING GUIDE

The images in this guide are provided for illustrative purposes only and are intended as a general visual reference. Actual spark plug condition, colour and appearance may vary between engines and operating conditions.

This guide should not be relied upon as a definitive diagnostic tool. Always perform appropriate inspections and diagnostic testing to accurately identify the cause of any fault before replacing parts or undertaking repairs.

Normal Condition

Appearance: Light grey, tan or light brown insulator.

What it means: Spark plug and engine are operating correctly.

Overheated

Likely cause: Lean fuel mixture, incorrect ignition timing or engine overheating.

Action: Check engine settings and cooling system. Replace the spark plug.

Carbon Fouling

Likely cause: Rich fuel mixture, restricted air intake, excessive idling or short journeys, incorrect heat range.

Action: Check the air/fuel mixture, air filter and replace the spark plug.

Lead Fouling

Likely cause: Fuel additives combined with prolonged light-load driving.

Action: Replace the spark plug and check fuel quality.

Oil Fouling

Likely cause: Oil entering the combustion chamber due to engine wear or excessive oil consumption.

Action: Repair the engine fault and replace the spark plug.

Pronounced Lead Fouling

Likely cause: Fuel additives combined with prolonged light-load driving.

Action: Replace the spark plug and check fuel quality.

Melted Electrodes

Likely cause: Severe overheating or pre-ignition.

Action: Check ignition, fuelling and cooling systems before fitting a new spark plug.

Ash Formation

Likely cause: Oil or fuel additive residues.

Action: Investigate oil consumption, repair if required and replace the spark plug.

Ground Electrode Wear

Likely cause: Long service life or aggressive combustion conditions.

Action: Replace the spark plug and check engine operation.

Insulator Damage

Likely cause: Impact damage, incorrect installation or severe engine conditions.

Action: Replace the spark plug and inspect for the root cause.
