## AUTOMOTIVE

---

# HEAT EXCHANGERS

---

The heater matrix is a **compact heat exchanger that uses hot engine coolant to provide warmth inside the vehicle cabin**. Located within the HVAC system, they transfer heat from the coolant into the surrounding airflow, **allowing the blower system to deliver warm air through the vehicle's vents** for cabin comfort and effective windscreen demisting.

**Engineered for efficient heat transfer.  
Trusted cooling expertise.**

Despite their compact size, the heater matrix **operates under continuous thermal and pressure demands**. Serck Automotive Heat Exchangers are manufactured to **rigorous quality standards, with a focus on efficient heat transfer, reliable sealing performance** and dependable long-term operation across a wide range of passenger car and light commercial vehicle applications.
